Do you want to save lives?

8%

Currently less than 8 % of those diagnosed with pancreatic cancer survive beyond 5 years

For those diagnosed in time for surgery their chance of surviving beyond five years increases tenfold

You can play a key role in spotting the symptoms of pancreatic cancer for early dianosis.

"Community Pharmacy is now well acknowledged as a cornerstone of equitable NHS Care. As the most accessible delivery point of healthcare, with innumerable daily contacts, care interactions and conversations, this is why evidence indicates that improving earlier pancreatic cancer diagnoses requires the Community Pharmacy team. Earlier diagnoses saves lives and improves treatment outcomes."

Ade Williams MBE, Pharmacist
Ambassador for Pancreatic Cancer Action

Complete our training resource to save lives

"This training resource, provided by Pancreatic Cancer Action, who have long championed the role and expertise of Community Pharmacy Teams including the wider pharmacy profession now embedded across the NHS footprint, helps provide the knowledge and expertise needed. Please do take some time to complete the e-learning module, so that together we will help save lives."

Ade Williams MBE, Pharmacist
Ambassador for Pancreatic Cancer Action

15 mins

The resource has been developed for the community pharmacy team to help spot potential symptoms of pancreatic cancer among pharmacy customers, to help aid early diagnosis.

It will take around 15 minutes to complete.
